

# Wetlands

## **US 95, ELECTRICAL SUBSTATION TO SMITH CREEK**

North of Moscow, Idaho

Completed July 2003

Wetland identification, delineation, impacts analysis, and mitigation plans were completed for a 12 acre recreational and educational restoration site. Project impacts were to palustrine emergent, scrub-shrub, and forested wetland communities. Wetland mitigation planning and Section 404 of the Clean Water Act-permitting activities included site design, plant and monitoring scheduling, contingency planning, special provisions development, and extensive coordination with the U.S. Department of Agriculture Forest Service.

## **BLACK CANYON WETLANDS**

Gem County, Idaho

Completed March 2006

Wetland identification, delineation, impacts analysis, and mitigation plans were completed for a private development. Project impacts were to palustrine emergent, scrub-shrub, and forested wetland communities. Wetland creation, enhancement, restoration, and mitigation planning and Section 404 of the Clean Water Act-permitting activities included site design, plant and monitoring scheduling, and contingency planning.

## **US 20 HITT ROAD AND ST. LEON INTERCHANGES**

Idaho Falls, Idaho

Completed February 2002

Wetland identification, delineation, and mitigation planning were completed for jurisdictional and non-jurisdictional wetlands. Project impacts were to Willow Creek, an intermittent stream with palustrine emergent, scrub-shrub, and forested wetland communities. Wetland impacts were mitigated at an off-site mitigation area.
